## Bronchite asthmatiforme en anglais

asthmatiforme Translate when you enter the world's leading drag and drop document Translate now These examples may contain rude words based on your search. These examples may contain vulgar words based on your search. Jan a eu sa première bronchite asthmatiforme à deux mois. Jan suffered from bronchitis asthma at two months. Jan vient pour une première advice en 2011 pour une bronchite asthmatiforme, des problèmes de concentration en classe et des troubles du sommeil. Jan was brought in for her first consultation in 2011 due to bronchitis asthma, school concentration issues and sleep problems. Au bout de quelques temps, il arrêté de tousser mais est devenu encore plus malade: il a été admis à l'hôpital pour une bronchite asthmatiforme, traité par de la Ventoline. After a while, he stopped coughing, but became more serious: he was admitted to the hospital with asthmatis, where he received Ventolin. L'association constante d'une subluxation chondrocostale de la seconde côte et d'un asthme à l'effort, ainsi que l'association constante d'une subluxation de la 3ème côte et de bronchite asthmatiforme, me donne la force de l'affirmation. The constant link of a chondrocostale subluxation of the second coast and an asthma for effort, as well as the constant link of a subluxation of the 3rd coast and asthmatiforme bronchial asthmatiforme, gives strength to my assertion. No results were found for this significance. FrenchI En 1998, on ne parle plus que de bronchite chronique et non précisée et emphysème. i In 1998 was called chronic or ina identifien bronchitis and emphysema. FrenchLes habitants des villes sont exposés à des maladies respiratoires telles que l'asthme, la bronchite et l'emphysème. City residents are exposed to respiratory diseases such as asthma, bronchitis and emphysema. FrenchUn enfant de 1 an également attrapé une bronchite à cause des méthodes employées et de la durée de la perquisition. A 1-year-old child also has bronchitis because of the way and time of the search. FranceAll a signalé de nombreux cas de bronchite asthmatique chez les enfants et les adultes vivant à proximité de l'usine. He has reported numerous cases of bronchial asthma in both children and adults living in the vicinity of the mixing plant. FrenchSa santé s'est depuis fortement Ti-ng Ph-pSa health has since deteriorated severely deteriorated unsym treated bronchitis, tooth abscess and scabies infection. Since then, his health has deteriorated significantly after unre treated bronchitis, a tooth and scabies. France We must warn people about the risks of smoking, developing lung cancer, but also bronchitis and asthma. We must warn about the dangers of smoking, the dangers of lung cancer and also the risk of bronchitis and asthma. Frenchson cold turned into cold bronchitis he had settled on his chest FrenchI suffered from chronic bronchitis and the doctor told me that I had to quit smoking if I didn't want to put my life at risk. I have chronic bronchitis and I was told by my doctor that I had to give up because otherwise my life would be in danger. French bronchitis forced him to keep bed bronchitis keeping him in bed FrenchAn exposed to wood dust which led to a serious risk of developing nasal cancer, chronic bronchitis and allergies. A person exposed to wood dust has a serious risk of developing nasal cancer, chronic bronchitis and allergies. Frenchmon cold turned into bronchitis my cold turned into French bronchitis then got flu, bronchitis and pneumonia, followed by childhood diseases. In the early 1920s, heart and kidney disease was the leading cause of death, followed by influenza, bronchitis and pneumonia, and diseases of early infancy. FranceShe causes other diseases such as asthma, bronchitis, tuberculosis, cataracts, hypotrophy and heart disease. Other conditions associated with indoor air pollution include asthma, bronchitis, tuberculosis, cataracts, birthweight and heart disease. He suffered from bronchitis and had asthma for the first time in his life, which resulted in 10 days in hospital. As a result, he suffered from bronchitis and suffered from asthma for the first time in his life, after which he was hospitalized for 10 days. FranceThis are all people with chronic diseases, such as chronic bronchitis, for example, because of the use of fossil fuels. It is about all people suffering from chronic diseases, for example chronic bronchitis, because of burning fossil fuels. Frenchasee has bronchitis to have bronchitis French bronchitis an attack of French bronchitisit is all people with chronic diseases, such as chronic bronchitis for example, because of the use of fossil fuels. It is about all people suffering from chronic diseases, for example chronic bronchitis, because of burning fossil fuels. Asthma Outbreaks in Real Time Best Quality in the World Documents Loaded by Slide-and-Drop Try Update on November 19, 2018 Definition of Bronchitis Asthma: - Asthma is Bronchospasm, which is clinically defined as shortness of breath (or shortness of breath) exhalation, drama, noc night readiness, changes in time and reverses naturally or under the effect of treatment. - The use of other names such as asthma bronchitis, indigestion bronchitis or spasticity, often with the aim of not causing anxiety to the environment, leads to too many cases of being diagnosed with asthma and therefore has an inappropriate and harmful therapeutic attitude. - The severity criteria for asthma are important to know. They condition the attitude of treatment. - Severe acute asthma is the main complication of asthma. It can progress to death and is the leading cause of asthma death. - Allergic asthma (or external asthma such as asthma to house dust mites) is a well-defined body that has long been common to fight inland asthma, which is considered non-allergic, such as asthma due to intolerance to aspirin. - Inland asthma is actually probably uncommon, from 7 to 8% according to some studies. - Among various forms of clinical asthma, it is important to note that the peculiarities of stress asthma (or more precisely asthma after exercise): symptoms of bronchial obstruction occur in the moment after stopping the effort (taken in some cases conditions) and reach a maximum in 5 to 10 minutes. They regress naturally and gradually return to their previous state in 30 to 60 minutes, depending on the intensity of the effort. Connection Patients should be notified of the first signs of hypersensitivity reactions (including urticaria, general urticaria, chest tightness, asthma breathing, hypotension) and anaphylactic shock Patients should be informed of early signs of hypersensitivity reactions (including urticaria , general urticaria, chest tightness, wheezing, hypotension) and anaphylactic shock Two diseases are lung cancer and chronic asthma bronchitis. EurLex-2 EurLex-2 Patients should be informed of the first signs of amolytic reaction (including rash, general rash, chest tightness, asthma breathing, hypotension) and anaphylactic shock Patients should be informed of early signs of amolytic reaction (including urticaria, general urticaria , chest tightness, wheezing, hypotension) and ANAPHYLA EMEA0.3 EMEA0.3 Generalized or allergic reactions (may include: blood vessels. , burning and perforation at the injection site, chills, redness, generalized urticaria, headache, urticaria, hypotension, lethargy, nausea, agitation, tachycardia, chest , tingling, vomiting, asthma breathing) are rarely observed with ReFacto and may in some évoluer vers une anaphylaxie sévère, y include un choc (voir rubrique Desensitization or allergic reactions (may include anovascular edema, burning and stinging local infusion, chills, flushing, general urticaria, headache, rash, hypotension, lethargy, nausea, tachycardia, angina, tingling , vomiting, wheezing) has been observed in no time often for ReFacto, and in some cases may progress to severe anaphylactic shock including shock (see EMEA0.3 EMEA0.3 Dans les régions où sont situées des usines chimiques et pétrochimiques, les sont allergy troubles plus répandus (dermatites, bronchites asthmatiformes , asthme, etc. ). In the area around chemical and chemical plants there is a greater proportion of allergic diseases (dermatitis, bronchitis asthma, bronchial asthma and others) MultiUn MultiUn Dans les régions où sont situées des usines chimiques et pétrochimiques, les troubles allergiques sont plus répandus (dermatites bronchites asthmatiformes, asthmes, etc. ). In the areas around chemical and chemical plants there is a higher incidence of allergic diseases (dermatitis, bronchitis asthma, bronchial asthma and others). UN-2 UN-2 Les patients doivent être informés des signes précoces des réactions d' hypersensibilité: gêne respiratoire, dyspnée, oedème, urticaire, prurit, chest oppression, respiratory asthma, hypotension and antipyphytics Patients should be informed of early signs of a desensitic reaction including shortness of breath, shortness of breath, swelling, urticaria, itching , chest tightness, wheezing, hypotension and anaphylactic shock EMEA0.3 EMEA0.3 Les patients doivent être informés des premiers signes des réactions d' hypersensibilité , urticaire généralisée, chest oppression, respiratory asthma, hypotension) et d anaphylaxis Patients should be notified of early signs of hypersensitivity reactions (including urticaria , generalized urticaria, angina, wheezing, hypotension) and ANAPHYLA EMEA0.3 EMEA0.3 La Committee proposes des lors que toutes les bombes vendues au public contiennent des gants en polyéthylène (par exemple, incorporés dans le couvercle) et que des avertissements y soient convenablement apposés concernant les dangers de réactions allergiques (inhabituelles) au MDI chez des personnes déjà sensibles (par exemples , incorporés dans le couvercle) et que des avertissements y soient convenablement apposés concernant les dangers de réactions allergiques (inhabituelles) au MDI chez des personnes déjà sensibles, ou de réactions asthmatiformes (chez des personnes souffrant d'asthme) ou de réactions cutanées (chez des personnes souffrant déjà de problèmes de peau , fold into the lid) and that can be labeled appropriate for the danger of allergic reactions (non-standard) with MDI from people who are already sensitive , or of asthma as reactions (from asthma sufferers) or skin reactions (from people who have suffered skin problems 04 04 Une hypersensibilité ou reactions reactions (may include: anovascular edema, burns and punctures at the injection site, chills, redness, generalized urticaria, headache, urticaria, hypotension, lethargy, nausea, agitation, tachycardia, chest tightness, tingling, vomiting, asthma breathing) are rarely observed with ReFacto AF and in some cases may progress to severe anaphylactic shock , including shock (see also Hypersensitivit or allergic reactions , local burning and stinging infusion, chills, flushing, generalized urticaria, headache, urticaria, hypotension, lethargy, lethargy, restlessness, tachycardia, chest tightness, tingling, vomiting, wheezing) have been observed in no time often for ReFacto , and in some cases may progress to severe anaphylactic shock including shock (see EMEA0.3 EMEA0.3 This shows that these 27 artists have significantly high rates , asthma bronchitis, hematological formulations of hyperchrome anemia and blood clot disorders. The following revealed to 27 painters a significantly high rate of subjective neurological complaints, bronchitis with asthma, hematoma image anemia, and blood clot disorders. Springer Springer Committee therefore proposes that all bombs sold to the public contain polyethylene gloves (for example, combined into the lid) and properly placed warnings about the dangers of allergic (abnormal) reactions to MDI in people who are already sensitive, or asthma reactions (in people with asthma) or skin reactions (in people who already have skin problems). The Commission therefore recommends that all cans sold to the public should contain polyethylene gloves (for example, folded into the lid) and that can be appropriately labeled for the dangers of allergic (non-standard) reactions to MDI from people who are already sensitive, or like asthma reactions (from people with asthma) or skin reactions (from people who have had skin). EurLex-2 EurLex-2 Appropriate manual for products containing MDI may cause allergic reactions in people who are sensitive to diisocyanates other than MDI which can cause asthma reactions in people with asthma who may cause skin reactions in people with skin problems using masks with air filters (EN 14387 : 2004 masks are equipped with A1 type filters) in areas that have not ventilated instructions will inform and protect consumers when using products based on MDI. Proper instructions for use on products containing MDI May cause allergic reactions to individuals already sensitive to diisocyanates other than MDI May elicit reactions in people with asthma Can cause skin reactions for individuals with skin problems Use a mask with an antigas filter (i.e. type EN 14387:2004 mask with type A1 filter) under poorly ventilated conditions Average: Specific instructions will inform and protect consumers during the use of MDI products. EurLex-2 EurLex-2 Disensitivity or allergic reactions (may include: anovascular edema, burns and punctures at the injection site, chills, redness, generalized urticaria, headache, urticaria, hypotension, lethargy, nausea, agitation, tachycardia, chest tightness, tingling, vomiting, asthma breathing) are rarely observed with ReFacto and in some cases may progress to severe anaphylactic shock , including shock (see Hypersensitivit or allergic reactions , local combustion and stinging infusion, chills, flushing, generalized urticaria, headache, urticaria, hypotension, lethargy, lethargy, nausea, tachycardia, angina, tingling, vomiting, wheezing) have been observed in no time often for ReFacto , and in some cases may progress to severe anaphylactic shock including shock (see EMEA0.3 EMEA0.3 People with environmentally sensitive conditions often have runny nose and respiratory reactions, with asthma , but they do not necessarily have to be allergic in the classical sense. People with environmental sensitivity often experience runny nose and respiratory responses, with asthma-like symptoms, but this is not necessarily a classic allergy. Cows common Rates of bronchitis asthma and birth defects in children under 14 years of age are higher than in Yerevan compared to the national average. The incidence of bronchial asthma and birth defects in children up to 14 is higher in Yerevan than in the republic as a whole. UN-2 UN-2 People with pre-epidemic diseases such as asthma or other respiratory diseases may be particularly susceptible to severe EV-D68 infection and may experience shortness of breath or asthma. People with pre-pre-date diseases, such as asthma or other respiratory diseases, may be particularly susceptible to severe infections caused by EV-D68 and may have difficulty breathing or wheezing. WHO People with environmentally sensitive conditions often suffer from runny nose and reactive respiratory diseases, with asthma symptoms, but they do not necessarily have to suffer from allergies in the classical sense. For parisillers, the terms allergy and detrimental reactions may seem comparable, but in the medical sense, allergies refer to a specific type of reaction of the body, which causes inflammation. B May explain a) Chemical exposure In recent history, Canadians have been exposed a rapidly expanding amount of new synthetic chemicals, with more than 23,000 not being evaluated for health effects.e At work or elsewhere, chemicals can enter the body by ingestion, inhalation or absorption through the skin. Giga-fren Giga-fren Toxic substances found in air pollution such as SO2, NO2 or photo oxidizing particles such as ozone cause respiratory diseases in humans, which occur after acute exposure with short duration, mainly through asthma reactions in the bronchial tree. Short-term exposure to air pollutants and especially sulfur dioxide, nitrogen oxides and phototheic oxidants can cause respiratory symptoms similar to acute bronchial asthma.
